14. ABSTRACT Objectives—This report describes the patient population and the broad range of health care services delivered in the permanent, continuously operating US Air Force Flight and Operational Medicine Clinics (FOMC). This report includes information regarding patient characteristics, services provided, clinic utilization, and trend estimates. Methods— A cross sectional analysis was performed on the retrospective cohort of patients who received care at a FOMC during the period 2003-2012. Patient demographic and healthcare data were obtained from the Military Health System (MHS) data Mart (M2). Results— A total of 714,157 patients, comprising 4,829,626 encounters were included in the cohort. Combined, the 77 FOMCs included served an average of 180,996 patients annually across 11 major commands. Overall these patients were majority male (71.0%), and USAF service members or their dependents (80.6%). The largest age categories were 18- to 25-year-olds (45.0%), followed by 31- to 40-year-olds (20.7%). Acute visits were the most common type of health encounter, accounting for 33.6% of all encounters across the study period. The two most common primary diagnoses over the study period were Administrative/social admissions (489,182), followed by ICD-9 V70.5 Aviation Exams (486,341). The most common procedure was for ophthalmologic and otologic treatment, accounting for 65.8% of all procedures across the study period. The number of annual health encounters declined noticeably among USAF dependents and retirees over the course of the study period. Trend analysis revealed nine subpopulations that exhibited an increase or decrease in visits per year of at least 25% from 2003 to 2012.

# Air Force Aerospace Medicine Enterprise Ambulatory Medical Care Survey

## Abstract

*Objectives*—This report describes the patient population and the broad range of health care services delivered in the permanent, continuously operating US Air Force Flight and Operational Medicine Clinics (FOMC). This report includes information regarding patient characteristics, services provided, clinic utilization, and trend estimates.

*Methods*—A cross sectional analysis was performed on the retrospective cohort of patients who received care at a FOMC during the period 2003-2012. Patient demographic and healthcare data were obtained from the Military Health System (MHS) data Mart (M2).

*Results*—A total of 714,157 patients, comprising 4,829,626 encounters were included in the cohort. Combined, the 77 FOMCs included served an average of 180,996 patients annually across 11 major commands. Overall these patients were majority male (71.0%), and USAF service members or their dependents (80.6%). The largest age categories were 18- to 25-year-olds (45.0%), followed by 31- to 40-year-olds (20.7%). Acute visits were the most common type of health encounter, accounting for 33.6% of all encounters across the study period. The two most common primary diagnoses over the study period were Administrative/social admissions (489,182), followed by ICD-9 V70.5 Aviation Exams (486,341). The most common procedure was for ophthalmologic and otologic treatment, accounting for 65.8% of all procedures across the study period. The number of annual health encounters declined noticeably among USAF dependents and retirees over the course of the study period. Trend analysis revealed nine subpopulations that exhibited an increase or decrease in visits per year of at least 25% from 2003 to 2012.

## Introduction

The planning and management of health care delivery is becoming increasingly complex as the scientific basis for health care has grown. Complexity also arises from the multiplicity of decision makers involved, directly or indirectly, in health services

delivery. Decisions about whether to seek health care are made by individual persons; the health care provider makes choices about diagnostic and treatment options, and, ultimately, the patient is expected to choose provider recommendations based on their personal preferences and to adhere to the prescribed regimen. In the broader context of health care systems, managers and policy makers influence budget and staffing decisions that affect availability of services (1).

In a perfect world, all decision makers would have access to complete information and could use this information to make optimal choices. Health services research is the field of inquiry that provides such information to patients, providers, managers, policy makers, and researchers on the effectiveness of health care organization, patterns of service use, quality of care, health outcomes, and costs of care (2). Thus, health services research presents the framework for describing health care management problems to which epidemiological methods can be applied (1).

Epidemiology, in turn, provides the critical information, investigative methods, and tools for evaluation. In particular, epidemiology focuses attention on the population and those at risk—concepts that are central to the growing emphasis on population-based medicine that addresses individual and community level health care needs (1).

The purpose of the Air Force Aerospace Medicine Enterprise Ambulatory Medical Care Survey (AF-AME-AMCS) was to gather, analyze, and disseminate information about the in-garrison health care provided by the Air Force Medical Service's Aerospace Medicine Enterprise (AME). Ambulatory medical care in Flight and Operational Medicine Clinics (FOMCs) is the largest and most widely used segment of the AME-related health care system. AME providers deliver a variety of health care services ranging from primary care for special duty personnel and associated beneficiaries to occupational medicine services for the local installation and pre-employment placement exams for the Defense Department. This report describes care delivered in the permanent, continuously operating FOMCs and includes visits for the full spectrum of health care services delivered by employed providers.

The AF-AME-AMCS utilized centralized medical databases to analyze the cohort of FOMC patients seen during the period from 2003-2012. This report provides information on the following questions:

- Who is accessing health care services through FOMCs?
- What health care services are being provided in FOMCs?
- How often are individuals accessing health care services in FOMCs?

## Highlights

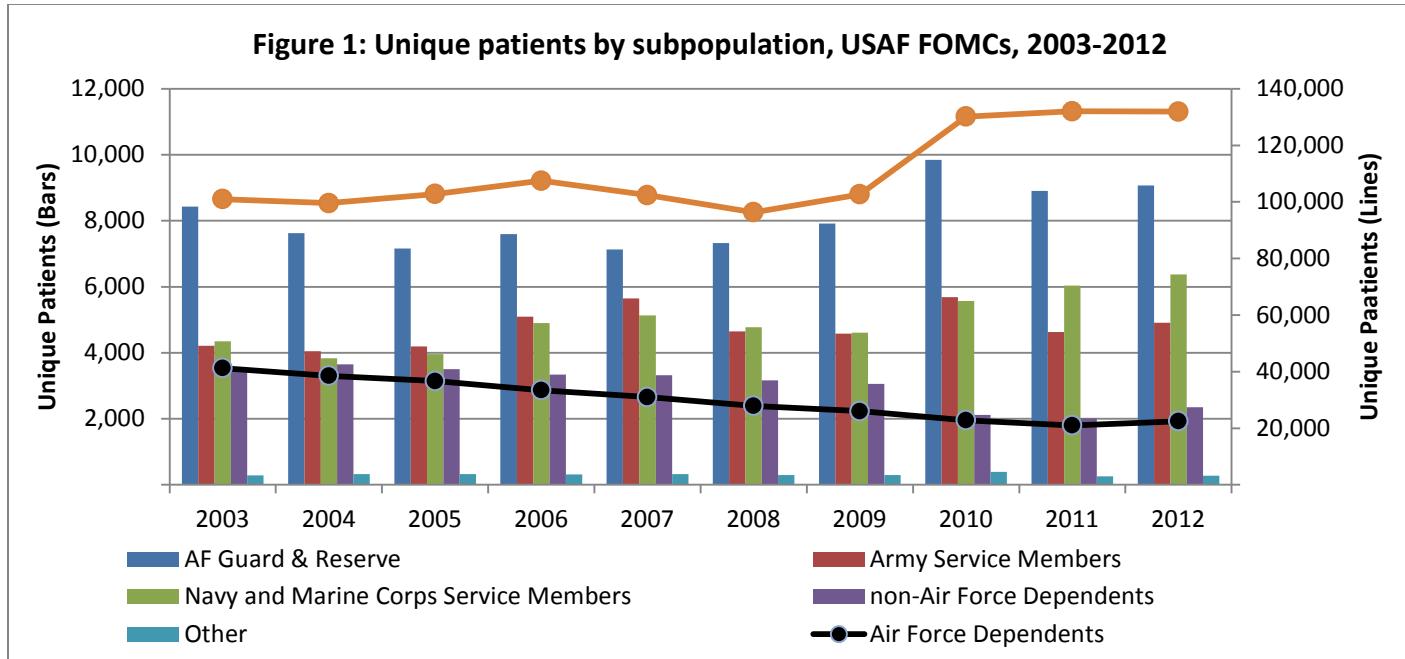

### Patient Population Characteristics

- A total of 5,408,806 health encounters for 743,995 individuals were extracted from MHS medical records. Based on study exclusion criteria (see Methods), data describing 4,829,626 encounters in a study population of 714,157 individuals were analyzed. Demographic analysis ([Table 1](#)) revealed that the study population was mostly male (71.0%), and either USAF service members or their dependents, retirees, or family members of retirees (80.6%). The largest age category in the study population was 18- to 25-year-olds (45.0%), followed by 31- to 40-year-olds (20.7%).
- US service members ([Table 2](#)) accounted for 70.2% (501,230 individuals) of the overall study population. USAF service members accounted for 87.6% of the service member population. Among the total USAF Active Duty population (405,897 individuals; [Table 3](#)),

the largest career area category (excluding “Other”; Appendix 2) was logistics (105,762 individuals, 26.1% of USAF Active Duty), followed by support (62,592 individuals, 15.4% of USAF Active Duty) (Appendix 2 and 3). USAF Reserve and US Air National Guard ([Table 4](#)) accounted for 6.6% of the overall service member population (33,191 individuals). The Reserve and National Guard population was older and had a higher proportion of field grade officers compared to USAF Active Duty.

- Taken together, members of US Army ([Table 5](#)), Navy and Marine Corps ([Table 6](#)) and Other services ([Table 7](#)) accounted for 12.4% of the service member population.
- Dependents and retirees ([Table 8 & 9](#)) accounted for 21.3% (152,126 individuals) of the study population. Most of this population (132,589 individuals, 87.2%) were USAF beneficiaries ([Table 8](#)), however this population declined on an annual basis over the course of the study period (Figure 1).
- Less than one-tenth (8.5%) of the study population was comprised of individuals (60,801) who were not US military service members, dependents or retirees ([Table 10](#)). The majority of these individuals were civilian federal employees and their family members (34.3%), patients not elsewhere classified (29.7%), NATO military (12.0%), and International Military Education and Training (IMET) students (7.6%) (data not shown).

**Figure 1: Unique patients by subpopulation, USAF FOMCs, 2003-2012**

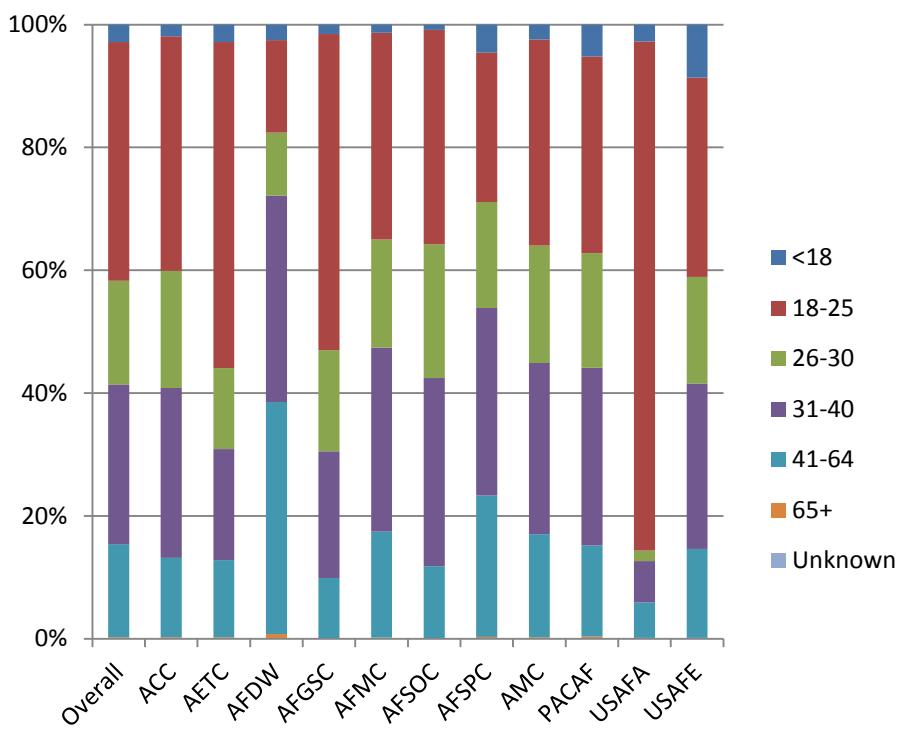

## Patient Population Characteristics by AF Organization

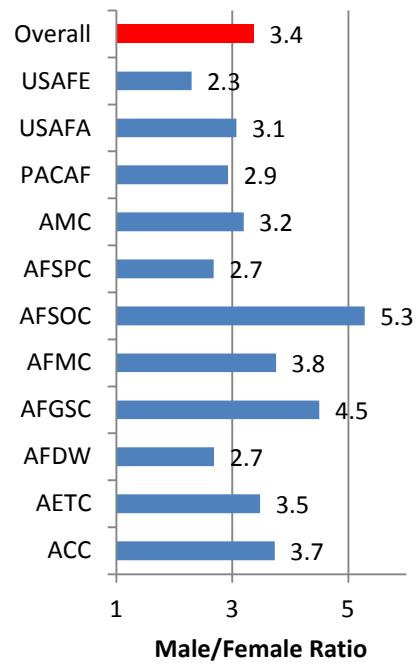

- During 2012, most of the 11 MAJCOMs exhibited similar demographic profiles ([Table 11](#)), with a few notable exceptions.<sup>1,2</sup>
- The USAFA, AETC and AFGSC care populations were relatively younger, as the proportions of 18- to 25-year-olds in these MAJCOMs were 82.9%, 53.1% and 51.6%, respectively, compared to 38.8% for the overall study population ([Table 11](#)). Additionally for USAFA, the proportions of 26- to 30-year-olds and 31-to 40-year-olds were 1.7% and 6.7%, respectively compared to 16.9% and 26.0% in the overall study population.

- The AFDW and AFSPC care population were relatively older, as the proportions of 18- to 25-year-olds were 15.0 and 24.3, respectively, compared to 38.8% for the overall study population. Additionally for AFDW and AFSPC, the proportions of 41- to 64-year-olds were 37.8% and 23.0%, respectively, compared to 15.2% for the entire study population ([Table 11](#), Figure 2).
- The overall gender distribution across all MAJCOMs in 2012 was 3.4/1 male/female (Figure 3). The highest proportion of males was at AFSOC (5.3/1 males/females). The highest proportion of females was at USAFE (2.3/1 males/females).

**Figure 2: MAJCOM Age Distribution, 2012**

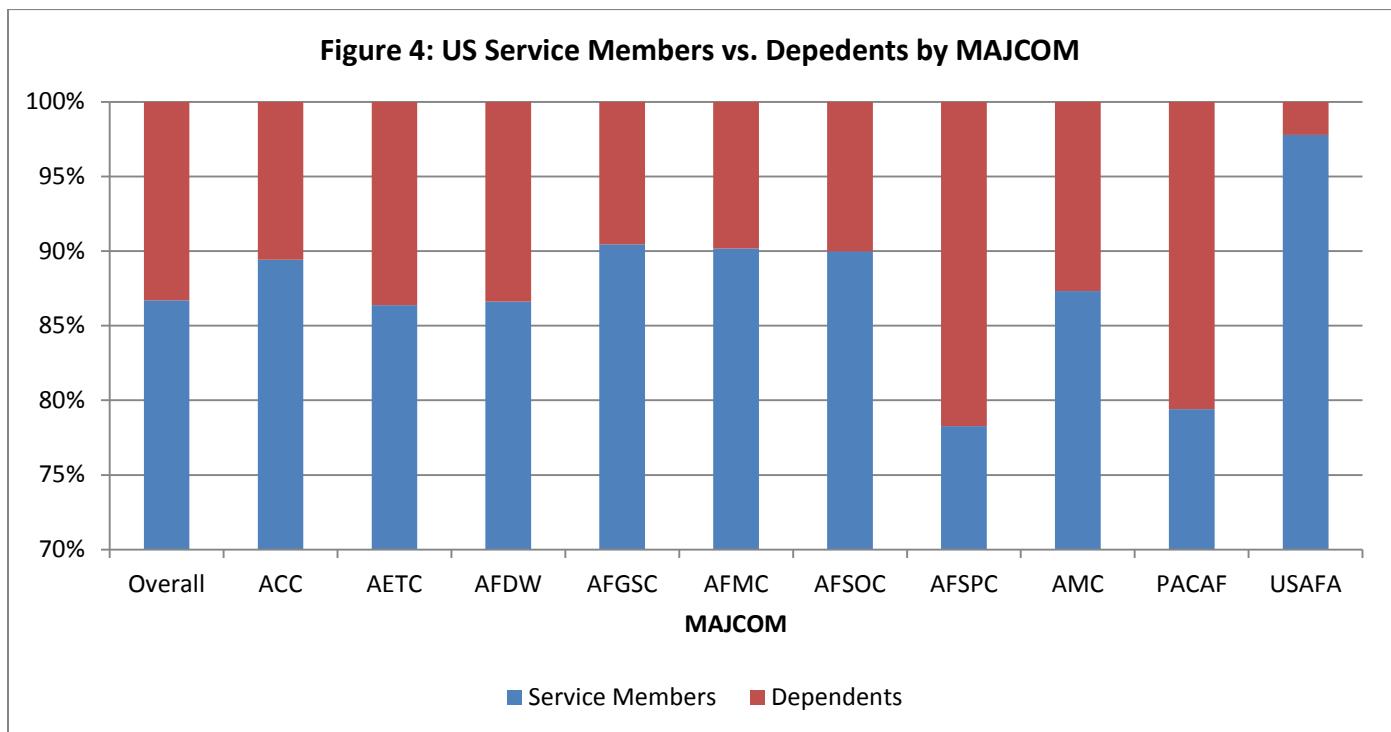

**Figure 3: MAJCOM Gender Distribution**

<sup>1</sup> Due to multicollinearity and the nested attribute of the variables, MAJCOM and clinic information were excluded from analysis of trend. For this reason, patient characteristics in 2012 were selected for discussion.

<sup>2</sup> See [Tables 12-22](#) for patient characteristics across the study period.

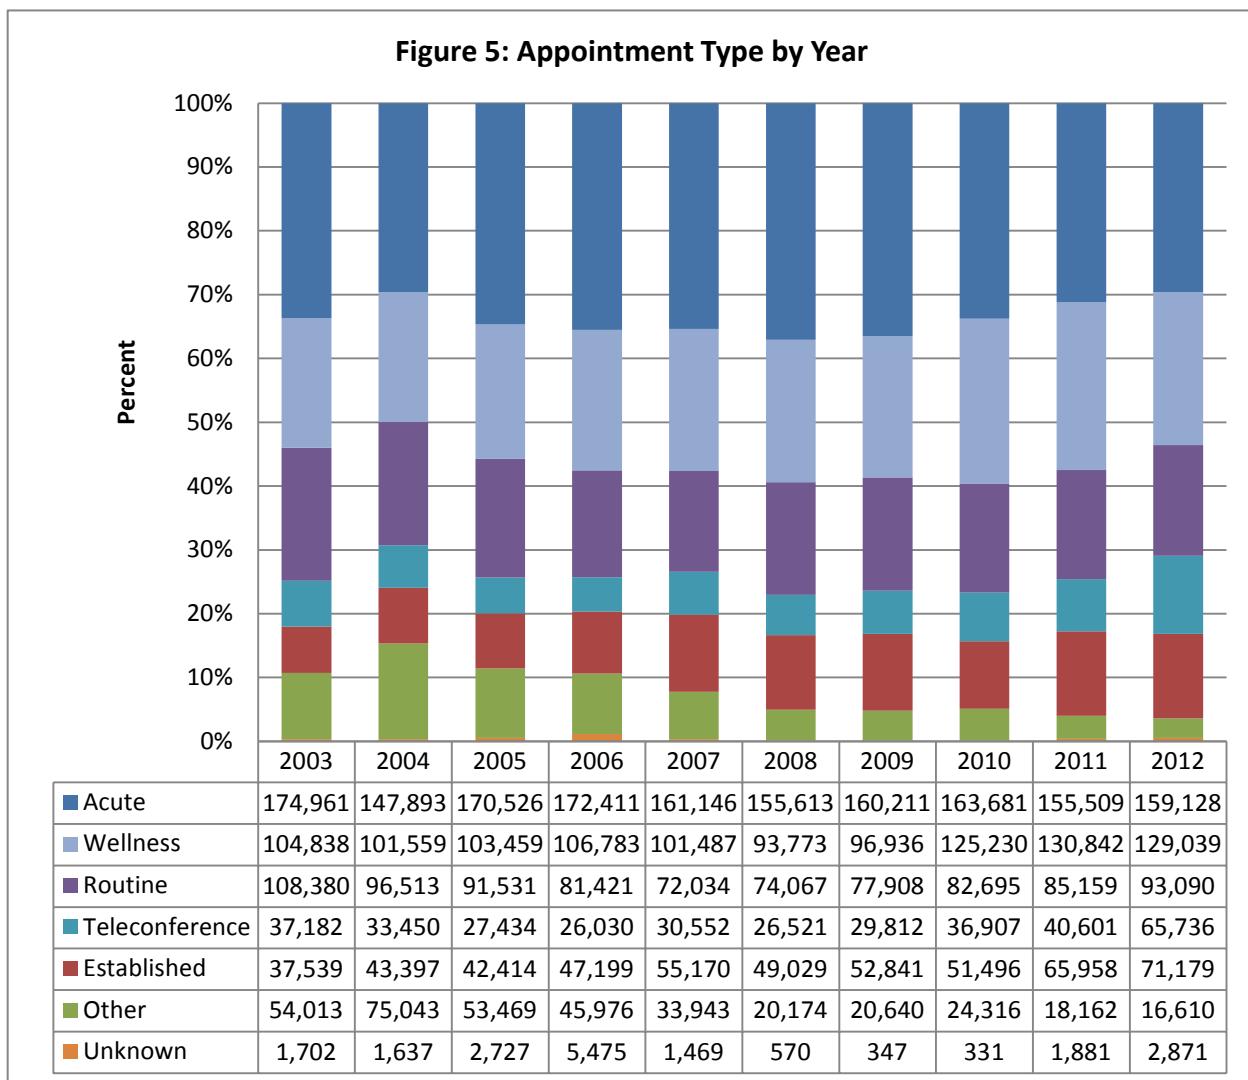

- Across MAJCOMs, the overall proportion of active duty individuals was 86.7% (excluding Other; Figure 4). The largest proportion of US service members was at USAFA (97.8%), while the largest proportion of dependents was at AFSPC (21.7%, Figure 4).
- In 2012, the proportion of US Army and US Navy/Marine Corps across all MAJCOMs was 3.3% and 3.7%, respectively ([Table 11](#)). The proportion of US Army was higher than average at AFSPC (10.7%). The proportion of US Navy/Marine Corps at PACAF and AFDW was 12.9% and 10.1%, respectively.

## Health Care Services: Exams & Procedures

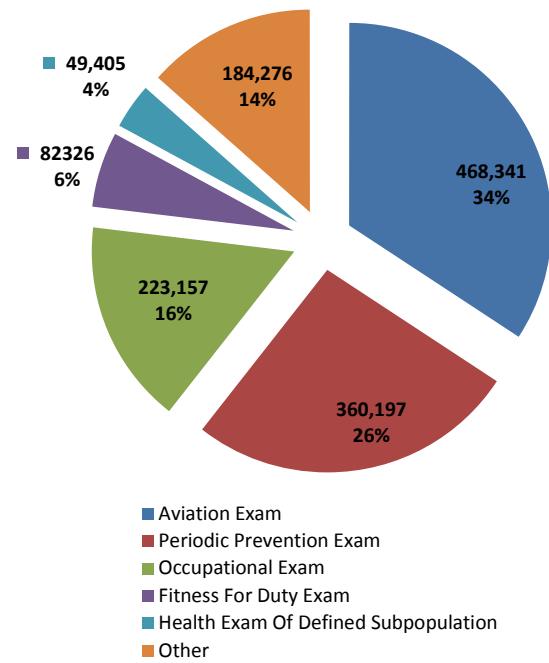

- Across 4,829,626 total health encounters captured within the FOMC system during the study period, 28.3% (1,367,702) were health exams coded as ICD-9 V70.5 primary diagnoses ([Table 23](#)).
- The relative frequencies of health encounter types remained relatively stable across the study period (Figure 5). **Acute** encounters were the most common, accounting for 33.6% of all encounters across the study

period. The annual proportion of acute encounters remained between 29.6% and 37.1% from 2003 to 2012. The second most common health encounter type was **Wellness**, which accounted for 22.7% of all health encounters across the study period. The highest annual proportion of wellness encounters was in 2011 (26.3%), while the lowest was in 2003 (20.2%). The highest annual proportion of the **Other** encounters was in 2004 (15.0%) while the lowest was in 2012 (3.1%).

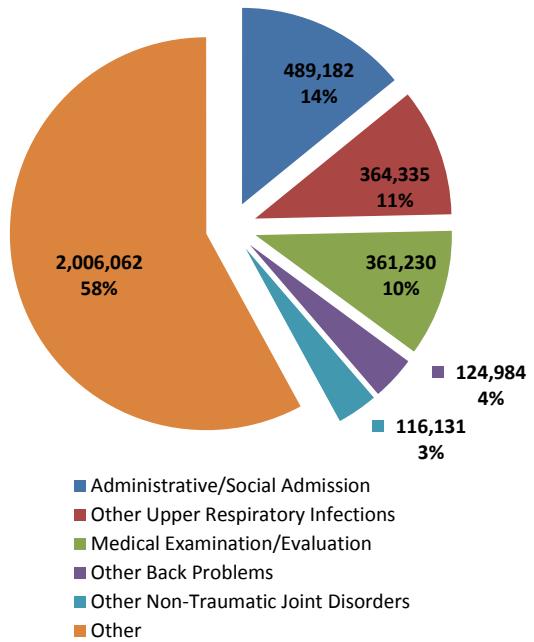

- Across the study period, the annual number of encounters with a primary diagnosis of V70.5 increased from 107,322 encounters in 2003 up to 174,473 in 2012. The year with the highest number of encounters was in 2011 (181,183 encounters) ([Figure 10](#)).
- Despite the increase in the absolute number of exams over the study period, the relative frequencies of exams by service remained stable ([Figure 10](#)). The proportion of USAF exams ranged from a low of 87.6 in 2008 to a high of 91.4 in 2011; US Army from 2.2 in 2005 to 3.2 in 2010; and US Navy and Marine Corps from 2.3 in 2005 to 3.7 in 2008.
- The three most common ICD-9 V70.5 primary diagnosis categories were Aviation Exam (34.2%), Periodic Prevention Exam (26.3%), and Occupational Exam (16.3%), which together accounted for more than two-thirds of V70.5 health exams ([Table 23](#), Figure 6).
- The three most common non-V70.5 primary diagnoses were **Administrative/social admission** (489,182 diagnoses, 14.3%), **Other upper respiratory infections** (364,335 diagnoses, 10.6%) and **Medical examination/evaluation** (361,230 diagnoses, 10.4%) ([Table 23](#), Figure 7).

**Figure 6: ICD-9 V70.5 Primary Diagnoses**

**Figure 7: non-V70.5 Primary Diagnoses**

- Across 1,593,445 total procedures captured in the FOMC system across the study period, 71.7% (1,143,188 procedures, [Table 24](#)) were performed as part of an ICD-9 V70.5 primary diagnosis encounter and 28.3% (450,257 procedures) were associated with a non-V50.7 primary diagnosis ([Table 25](#)). The largest procedure category<sup>3</sup> was Ophthalmologic and otologic diagnosis and treatment, accounting for 65.8% of all procedures (1,047,629). The next four largest procedure categories were Electrocardiogram (105,377 procedures, 6.6%), Prophylactic vaccinations and inoculations (85,347 procedures, 5.4%), Ancillary Services (50,208 procedures, 3.2%) and Excision of skin lesion (45,001 procedures, 2.8%).
- Within the Ophthalmologic and otologic diagnosis and treatment procedure category, the most common procedure subcategories<sup>4</sup> were **Pure Tone Audiometry** (321,796 procedures, 30.7%), **Visual Acuity Screening** (300,563 procedures, 28.7%;), **Visual Function Screening** (161,054 procedures, 15.4%), **Screening Test Pure Tone, Air Only** (107,551 procedures, 10.3%) and **Color Vision Examination** (79,568 procedures, 7.6%) ([Table 25](#)).
- Across encounters with V70.5 as a primary diagnosis, the largest procedure categories were **Ophthalmologic and otologic diagnosis and treatment** (976,746 procedures, 85.4%), **Electrocardiogram** (86,292 procedures, 7.6%), and **Other diagnostic procedures on lung and bronchus** (19,792 procedures, 1.7%). For encounters with non-V70.5 primary diagnoses the largest procedure categories were **Prophylactic vaccinations and inoculations** (78,873 procedures, 17.5%), **Ophthalmologic and otologic diagnosis and treatment** (70,883 procedures, 15.7%), and **Excision of skin lesion** (41,652 procedures, 9.3%) ([Table 25](#)).
- For all but three V70.5 primary diagnosis categories, the largest procedure category was **Ophthalmologic and otologic diagnosis and treatment**. **Prophylactic vaccinations and inoculations** was the largest procedure category for two primary diagnosis categories: **Pre-deployment Assessments** and **Initial Post-deployment Assessments**. **Laboratory – chemistry and hematology** was the largest procedure category associated with the **Deployment Health Reassessment** V70.5 primary diagnosis category ([Table 23](#)).

<sup>3</sup> The 2,299 unique CPT and HCPCS codes captured in the analysis were collapsed into 144 unique Clinical Classifications Software (CCS) procedure categories (see Methods).

<sup>4</sup> CPT code

- For the non-V70.5 primary diagnosis category of **Administrative/social admission**, the largest procedure category was **Ancillary Services** (16,119 procedures, 60.2%). The most common procedure associated with the **Medical examination/evaluation** primary diagnosis category was **Ophthalmologic and otologic diagnosis and treatment** (46.8%; 28,033 procedures) (Table 26).

## V70.5 Exams by AF Organization

- Across all MAJCOMS ([Tables 27-37](#)) the greatest number of V70.5 exams coded as primary diagnoses over the study period were observed in Air Combat Command (ACC) with 283,435 diagnoses (20.7%) ([Table 29](#)) followed by Air Mobility Command (AMC) with 266,052 exams (19.45%) ([Table 28](#)) and Air Education and Training Command (AETC) with 187,705 exams (13.72%) ([Table 27](#)).
- **Aviation Exam** was the most common V70.5 primary diagnosis category at six (AETC, AFDW, AFMC, AFSOC, USAFA, USAFE) of the 11 MAJCOMSs over the study period ([Table 38](#) and figure W). As seen in Figure W, **Aviation Exams** accounted for over half of all exams at AETC (59.20%). **Periodic Prevention Exam** was the most common category at three MAJCOMs (ACC, AFSPC, AMC). **Fitness for Duty Exam** and **Occupational Exam** were the most common category at AFGSC and PACAF, respectively, across the study period.
- Across all MAJCOMs, **Fitness for Duty Exams** made up one of the smallest proportions of exams, with the exception of AFGSC (31.31%).

## Utilization

- The median number of annual encounters for all individuals over the study period was 2 (interquartile range (IQR) 1-3) ([Table 39](#)). Approximately seventy-five percent of individuals had 3 or fewer annual encounters over the study period.
- Approximately seventy-five percent of US Service Members had 4 encounters or less, compared to 3 or less for Dependents.
- The median number of annual encounters was 2 for both 18- to 25-year-olds and 26- to 30-year-olds (IQR 1-4). For individuals aged <18 or 65+ years of age, the median annual encounters was 1 (IQR 1-2).
- The median number of annual encounters across rank categories was highest among ranks O1-O3 (median = 3; IQR 1-5) and O4-O6+ (median = 2; IQR 1-4).

- Seventy-five percent of patients seen at AFGSC, AETC, USAFA, and AFSOC had a median of 4 encounters annually.
- Trend analysis revealed nine subpopulations that exhibited an increase or decrease in visits per year of at least 25% from 2003 to 2012.
- Based on the model for USAF Cadet females, utilization increased by 139.64% and 160.2% for the 25<sup>th</sup> and 75<sup>th</sup> percentile of age, respectively (Figure 12). For the model of USAF Cadet males, utilization increased by 103.5% and 114.6% for the 25<sup>th</sup> and 75<sup>th</sup> percentile of age, respectively (Figure 13).
- Models for seven additional populations exhibited a decrease in utilization by at least 25%, including US Army E6 females, USAF E4 males, US Navy and Marine Corps 05 females, USAF E1 females, US Army E8 males, USAF E4 females and US Army W2 males (Table AA, Figure 14-20).

**Table AA: Subpopulation Utilization Trends**

Subpopulation	Percent Change in Utilization (2003 – 2012)		Annual Utilization Estimates			
	25 <sup>th</sup> Percentile (Q1)	75 <sup>th</sup> Percentile (Q3)	25 <sup>th</sup> Percentile (Q1)		75 <sup>th</sup> Percentile (Q3)	
			2003	2012	2003	2012
USAF Cadet females	139.64	160.23	0.67	1.61	0.59	1.53
USAF Cadet males	103.47	114.59	0.61	1.23	0.55	1.17
US Army E6 females	-74.37	-73.51	1.03	0.26	1.04	0.28
USAF E4 males	-64.65	-70.51	0.99	0.35	0.91	0.27
US Navy and Marine Corps 05 females	-59.67	-44.83	0.93	0.38	1.24	0.68
USAF E1 females	-56.61	-60.09	1.27	0.55	1.20	0.48
US Army E8 males	-47.51	-55.05	0.84	0.44	0.72	0.33
USAF E4 females	-46.27	-48.08	1.59	0.86	1.53	0.80
US Army W2 males	-27.30	-20.92	0.60	0.43	0.78	0.61

## Methods

### Study Design

This study was a retrospective medical records review of outpatient encounters from continuously operating FOMCs at USAF installations spanning calendar years 2003-2012.

### Data Sources

The Military Health System (MHS) data Mart (M2) was used to obtain data on September 10, 2013. For each encounter, the following variables were captured:

- Year of encounter
- Encounter type (e.g. wellness, acute care, teleconference)
- Diagnosis codes (first four) as defined by the International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM)
- Current Procedural Terminology (CPT) procedure codes (first four)
- Full cost of the encounter
- Patient age
- Patient sex
- Patient category (e.g., active duty, national guard, reservist, retiree, family member)
- Service member branch (e.g., Army, Navy, Air Force)
- Service member pay grade
- Medical provider specialty code
- Unique identifiers for:
  - Service member
  - Patient, if not a service member (e.g. family member)
  - Medical provider
  - FOMC

Non-countable appointment flag (e.g. no-shows, cancellations, patient left without being seen). Non-countable appointments were classified based on TRICARE criteria (see the appendix in the “Completion Factors” document, available from: <http://tricare.mil/tma/dhcape/data/m2.aspx>). Encounters occurring on the same date were flagged for reference. Flagged encounters with no associated cost were removed from the cohort. Age was calculated using date of birth and date of encounter; age was set to missing for those with erroneous birth dates. Associated USAF installation and MAJCOM were merged with the M2 data by clinic identifier ([Appendix 1](#)).

For Air Force service members in the dataset, Air Force Personnel Center (AFPC) data were used to obtain

military rank and Air Force Specialty Code (AFSC) at the beginning of the calendar year of the encounter. AFSC is an alphanumeric occupational code. Between 2004 and 2011, AFSCs were expanded to include specific skill levels and subspecialties. This resulted in a large number of unique career fields. For the purposes of this report, AFSCs were grouped by career areas and then further categorized by the first two alphanumeric digits of the AFSC once the prefix was removed. Career areas include: operations, logistics, support, medical, professional acquisition, special investigations, and special duty identifiers. A complete listing of the frequency of AFSCs for USAF service members is available in [Appendix 2](#) and [Appendix 3](#).

Rank and AFSC were merged with the M2 data using the service member’s identifier, date of birth, and year. Officers whose rank or pay grade were greater than O-6 were categorized as O-6.

To understand what health services were being provided at FOMCs, ICD-9-CM extenders for V70.5, *Health Exam of Defined Subpopulation*, were of interest. DoD extenders were developed to meet specific reporting requirements of the Services. A one-character extender is appended to the end of a specific ICD-9-CM code to represent a unique meaning. A list of V70.5 extenders can be found in [Table 40](#).

Diagnosis and procedure codes were recoded using two software tools developed as part of the Healthcare Cost and Utilization Project (HCUP). The first, Clinical Classification Software (CCS) for ICD-9-CM, aids analysts to collapse diagnostic data from the 14,000 diagnosis codes and 3,900 procedure codes that make up the ICD-9-CM standardized coding system into clinically meaningful categories. The second, CCS for Services and Procedures, groups Current Procedural Terminology (CPT) codes and Healthcare Common Procedure Coding System (HCPCS) codes into 244 clinically related categories. Additional information about this project and their databases and tools is available on their website: <http://www.hcup-us.ahrq.gov>.

### Measures/Variables

The objective of this study was to describe FOMC patient population demographics. Changes in patient populations over the ten year period were examined. Variables of interest included age, gender, rank of the service member, branch of the service member, and AFSC. Analyses were stratified by subpopulations: 1) US service members (US Air Force, USAF Guard &

Reserve, US Army, US Navy/Marine Corps, other; 2) dependents (USAF and non-USAF); and 3) other.

## Patient Population

### Inclusion Criteria

All patients seen at the FOMC were included regardless of age, gender, or other characteristic. This cohort represents the identifiable FOMC population.

### Exclusion Criteria

Encounters were excluded from the study if they met at least one of the following seven sets of criteria:

1. Diagnosis or procedure codes in positions 1-4 were missing, and the full cost of the appointment was \$0.00
2. Full cost was \$0.00 and the appointment type was a teleconference
3. Appointment type was a teleconference and the encounter was considered non-countable according to TRICARE criteria
4. Full cost was \$0.00 and the encounter was considered non-countable
5. Diagnosis codes in positions 1-4 were missing and the appointment type was a teleconference
6. Diagnosis codes in positions 1-4 were missing and the encounter was considered non-countable
7. Full cost was \$0.00 and there was duplicate record on the same calendar day

Patients were grouped into populations based on clinical knowledge of differing health care needs and demographics characteristics (Figure 8):

- 1) US Service Members
  - a. US Air Force Active Duty
  - b. USAF Reserve and Air National Guard
  - c. US Army
  - d. US Navy and Marine Corps
  - e. Other
- 2) Dependents
  - a. USAF
  - b. non-USAF
- 3) Other (civilian federal employees and family members, NATO military and family members, and patients not elsewhere classified)

## Statistical Analysis

The military health data repository contains longitudinal data and all eligible patient encounters were included (non-missing primary diagnosis data and cost). In this report covariates (independent variables: age, sex, rank, service, career area) are described for the overall population and then by subpopulation for all years and then by year.

A number of encounters were removed based on our inclusion criteria. If the source of error was systematic or disproportionately occurred within specific subgroups, then this could impact the true population estimate. However, the risk of this phenomenon was minimized by the large size of the sample.

A Poisson Regression analysis was applied to identify trends in utilization rate (visits per year). Using the linear and quadratic terms for the continuous predictor variables, Time and Age, a separate model was produced for each of 156 estimable subpopulations, based on all combinations of the class predictor variables, Gender, Pay Grade, and Service Category. For 21 models all linear and quadratic terms were significant at the 95% confidence level. An additional 8 models were significant at the 95% confidence level for linear terms. Using the 25th and 75th percentile for age to avoid the impact of extreme data points, the rate of change in visits each year was estimated over the 10 year period from 2003 to 2012.

## Institutional Review

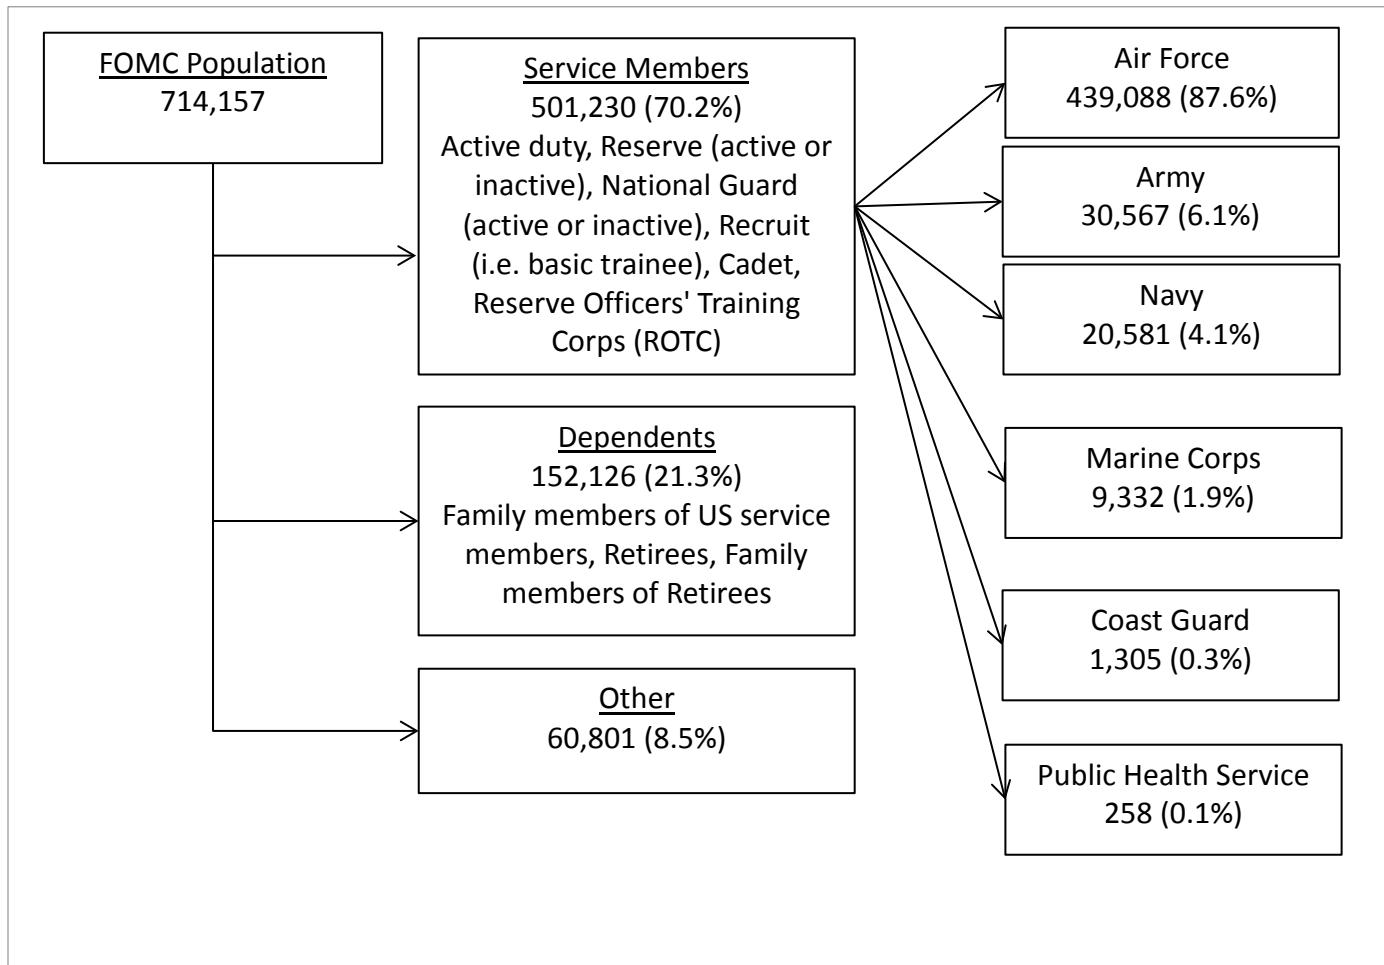

FOMC encounters feeds data into numerous DoD electronic medical record systems. The study was conducted strictly IAW with the Air Force Research Lab IRB approved protocol. Data collection and management was consistent with the Health Insurance Portability and Accountability Act (HIPAA) standards for safeguarding the privacy of individually identifiable health information. Each patient, family and medical provider was assigned a unique arbitrary number which stayed the same for all encounters.

## Figures

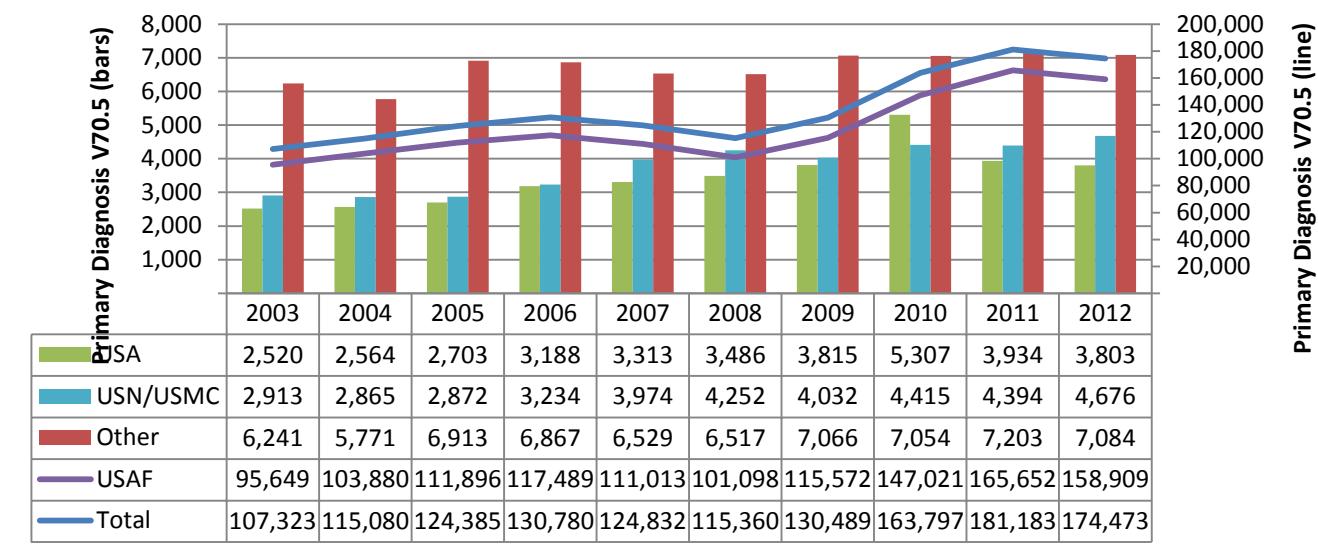

**Figure 8. Patient population at US Air Force Flight Medicine and Operational Clinics, 2003-2012**

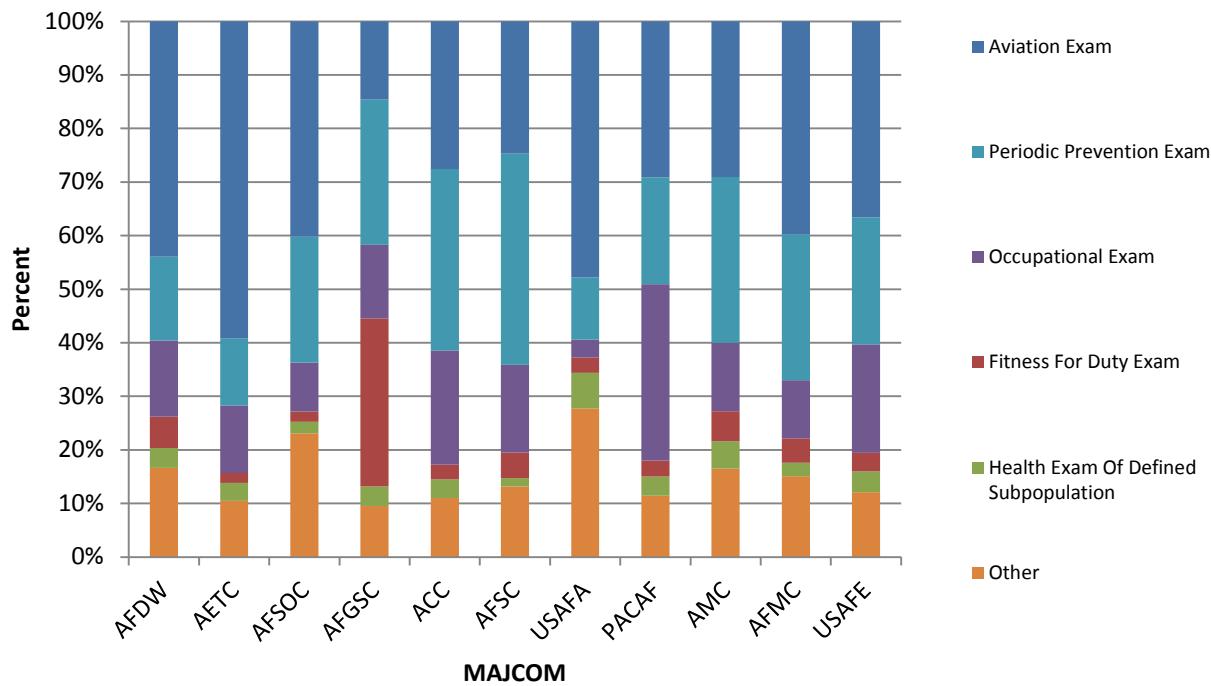

**Figure 9: Encounters Over Time**

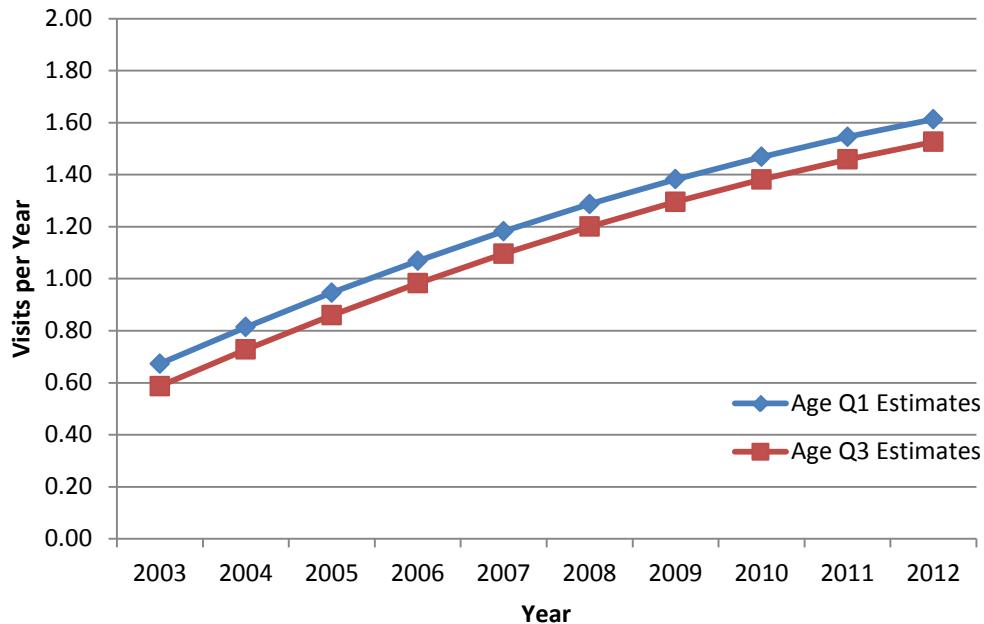

**Figure 10. Primary Diagnosis of V70.5 by Service**

**Figure 11: V70.5 Exams by Organization**

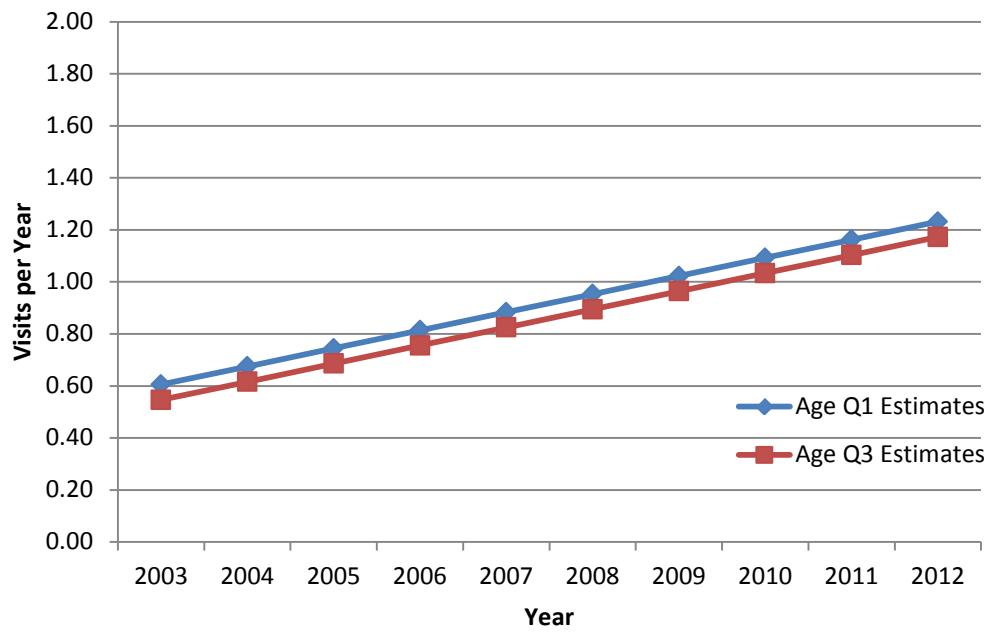

## Figure 12: USAF Cadet Female

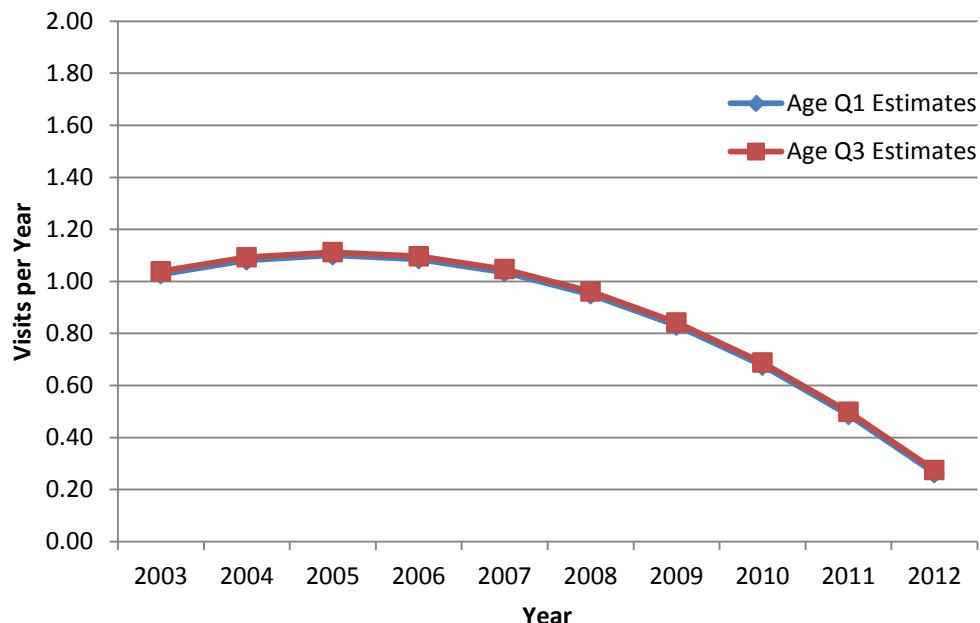

The subpopulation of Female Cadets in the USAF consisted of 7,449 observations. All of the terms for this model (linear and quadratic) were significant at the 95% confidence level. The 25th age percentile for the subpopulation was 18 years; from 2003-2012, visits increased within the 25th age percentile by 139.64%. The 75th age percentile for the subpopulation was 20 years; from 2003-2012, visits increased within the 75th age percentile by 160.23%. Statistical evidence and clinical significance of the rate of change over time indicate that this subpopulation requires further investigation to determine the cause(s) of these trends.

### Figure 13: USAF Cadet Male

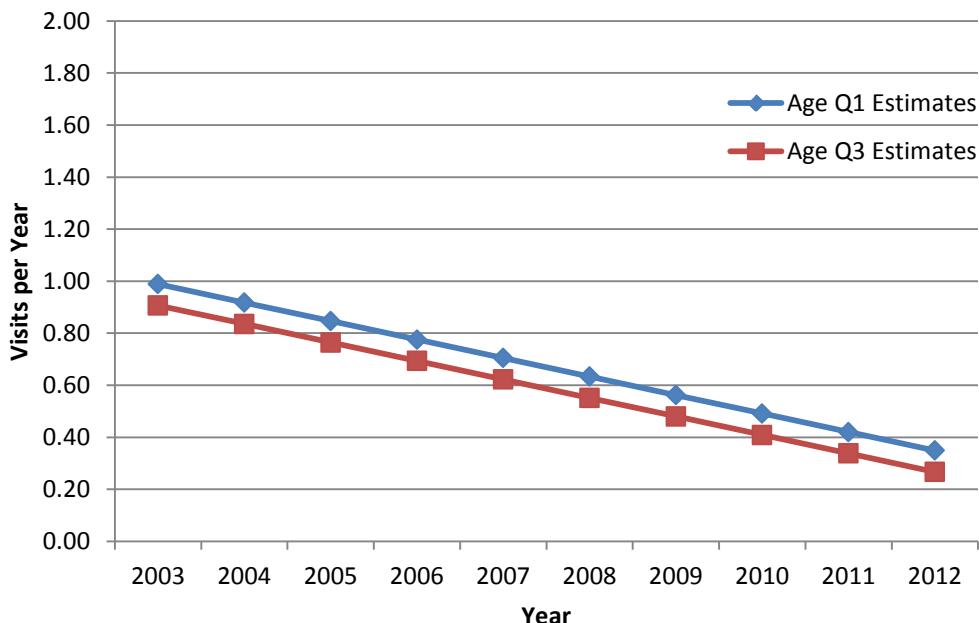

The subpopulation of Male Cadets in the USAF consisted of 27,032 observations. The terms for this model (linear) were significant at the 95% confidence level. The 25th age percentile for the subpopulation was 19 years; from 2003-2012, visits increased within the 25th age percentile by 103.47%. The 75th age percentile for the subpopulation was 21 years; from 2003-2012, visits increased within the 75th age percentile by 114.59%. Statistical evidence and clinical significance of the rate of change over time indicate that this subpopulation requires further investigation to determine the cause(s) of these trends.

**Figure 14: USA E6 Female**

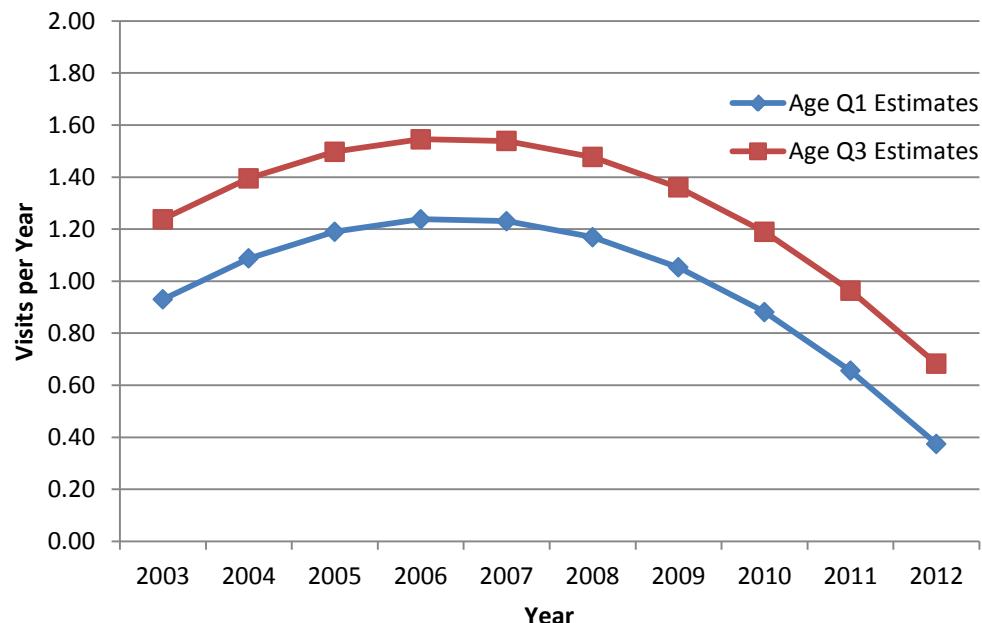

The subpopulation of Female E6 in the USA consisted of 982 observations. All of the terms for this model (linear and quadratic) were significant at the 95% confidence level. The 25th age percentile for the subpopulation was 28 years; from 2003-2012, visits decreased within the 25th age percentile by 74.37%. The 75th age percentile for the subpopulation was 39 years; from 2003-2012, visits decreased within the 75th age percentile by 73.51%. Statistical evidence and clinical significance of the rate of change over time indicate that this subpopulation requires further investigation to determine the cause(s) of these trends.

### Figure 15: USAF Senior Airman Male

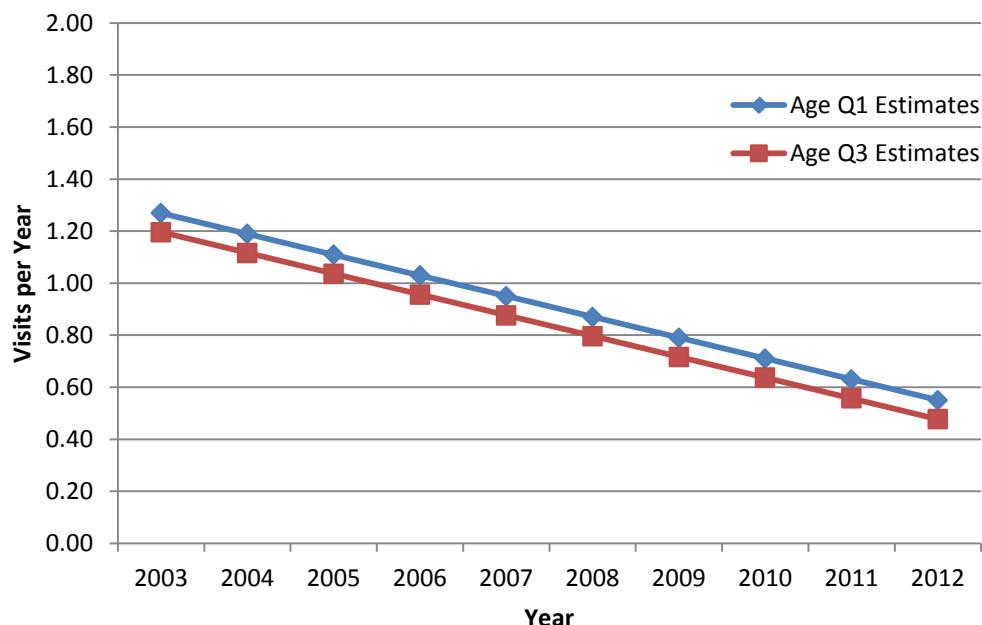

The subpopulation of Male E4 in the USAF consisted of 129,168 observations. All of the terms for this model (linear) were significant at the 95% confidence level. The 25th age percentile for the subpopulation was 22 years; from 2003-2012, visits decreased within the 25th age percentile by 64.65%. The 75th age percentile for the subpopulation was 26 years; from 2003-2012, visits decreased within the 75th age percentile by 70.51%. Statistical evidence and clinical significance of the rate of change over time indicate that this subpopulation requires further investigation to determine the cause(s) of these trends.

**Figure 16: USN/USMC O5 Female**

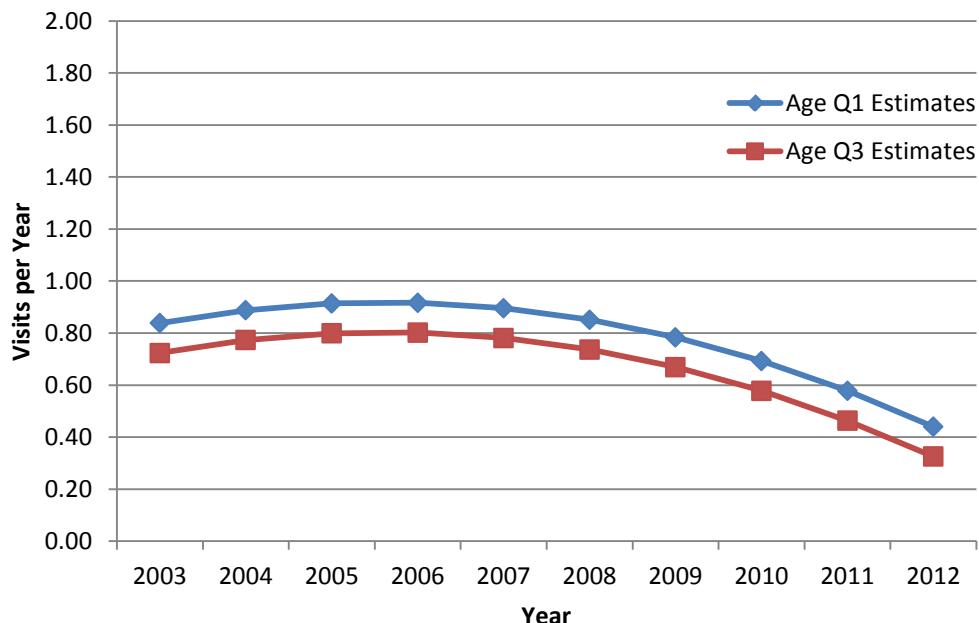

The subpopulation of Female O5 in the USN/USMC consisted of 179 observations. All of the terms for this model (linear and quadratic) were significant at the 95% confidence level. The 25th age percentile for the subpopulation was 41 years; from 2003-2012, visits decreased within the 25th age percentile by 59.67%. The 75th age percentile for the subpopulation was 48 years; from 2003-2012, visits decreased within the 75th age percentile by 44.83%. Statistical evidence and clinical significance of the rate of change over time indicate that this subpopulation requires further investigation to determine the cause(s) of these trends.

**Figure 17: USAF E1 Female**

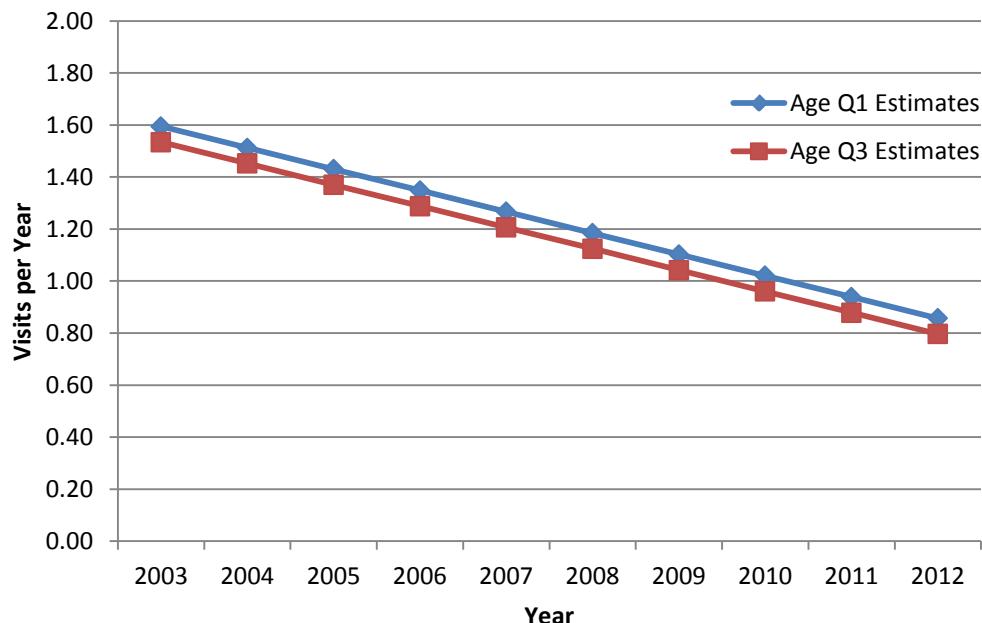

The subpopulation of Female E1 in the USAF consisted of 9,749 observations. All of the terms for this model (linear) were significant at the 95% confidence level. The 25th age percentile for the subpopulation was 18 years; from 2003-2012, visits decreased within the 25th age percentile by 56.61%. The 75th age percentile for the subpopulation was 20 years; from 2003-2012, visits decreased within the 75th age percentile by 60.09%. Statistical evidence and clinical significance of the rate of change over time indicate that this subpopulation requires further investigation to determine the cause(s) of these trends.

## Figure 18: USA E8 Male

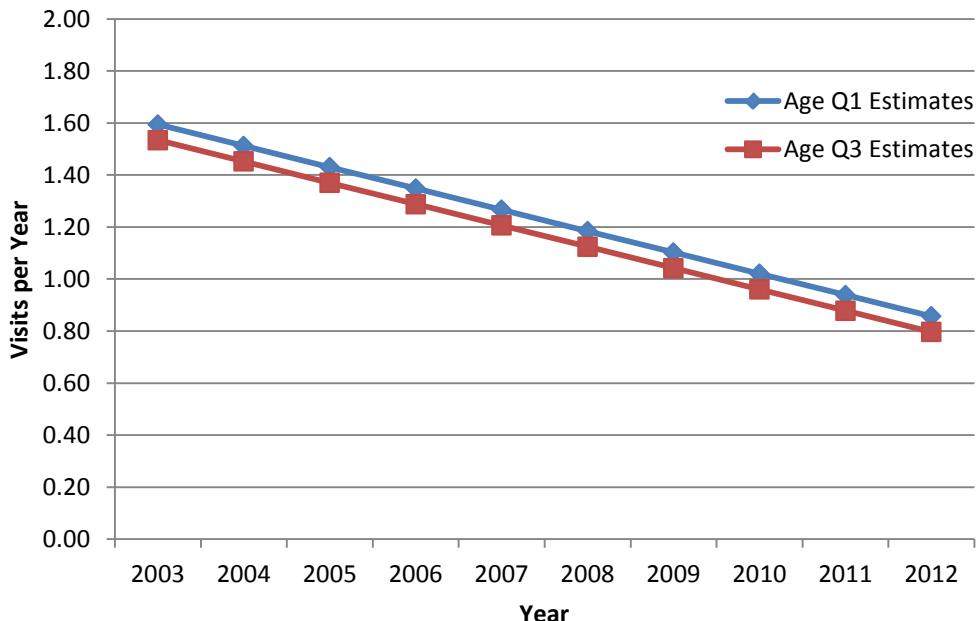

The subpopulation of Male E8 in the USA consisted of 1,927 observations. All of the terms for this model (linear and quadratic) were significant at the 95% confidence level. The 25th age percentile for the subpopulation was 40 years; from 2003-2012, visits decreased within the 25th age percentile by 47.51%. The 75th age percentile for the subpopulation was 50 years; from 2003-2012, visits decreased within the 75th age percentile by 55.05%. Statistical evidence and clinical significance of the rate of change over time indicate that this subpopulation requires further investigation to determine the cause(s) of these trends.

**Figure 19: USAF E4 Female**

The subpopulation of Female E4 in the USAF consisted of 29,806 observations. All of the terms for this model (linear) were significant at the 95% confidence level. The 25th age percentile for the subpopulation was 22 years; from 2003-2012, visits decreased within the 25th age percentile by 46.27%. The 75th age percentile for the subpopulation was 25 years; from 2003-2012, visits decreased within the 75th age percentile by 48.08%. Statistical evidence and clinical significance of the rate of change over time indicate that this subpopulation requires further investigation to determine the cause(s) of these trends.

## Figure 20: USA W2 Male

The subpopulation of Male W2 in the USA consisted of 970 observations. All of the terms for this model (linear and quadratic) were significant at the 95% confidence level. The 25th age percentile for the subpopulation was 33 years; from 2003-2012, visits decreased within the 25th age percentile by 27.30%. The 75th age percentile for the subpopulation was 43 years; from 2003-2012, visits decreased within the 75th age percentile by 20.92%. Statistical evidence and clinical significance of the rate of change over time indicate that this subpopulation requires further investigation to determine the cause(s) of these trends.

## Results

Table 1. Demographic characteristics of the patient population accessing health care services at Air Force Flight and Operational Medicine Clinics, 2003-2012.

Demographic	Overall		2003		2004		2005		2006		2007		2008		2009		2010		2011		2012

Notes. The denominator for the column titled 'Overall' is based on the number of unique patients seen over the study period. The denominator for each year column (e.g., 2006) is the number of unique patients seen during that calendar year. Patients are counted the first time they enter the cohort, both for the overall denominator and annual denominators; therefore their demographic information can vary annually. Percentages reported as "0.00" reflect percentages less than 0.01.

Notes. The denominator for the column titled 'Overall' is based on the number of unique patients seen over the study period. The denominator for each year column (e.g., 2006) is the number of unique patients seen during that calendar year. Patients are counted the first time they enter the cohort, both for the overall denominator and annual denominators; therefore their demographic information can vary annually. Percentages reported as "0.00" reflect percentages less than 0.01.

<sup>a</sup>Other consists of special investigations, special duty identifiers, and reporting identifiers.

Notes. The denominator for the column titled 'Overall' is based on the number of unique patients seen over the study period. The denominator for each year column (e.g., 2006) is the number of unique patients seen during that calendar year. Patients are counted the first time they enter the cohort, both for the overall denominator and annual denominators; therefore their demographic information can vary annually. Percentages reported as "0.00" reflect percentages less than 0.01. Other uniformed US service members consists of United States Coast Guard and National Oceanic and Atmospheric Administration, and the Public Health Service.

Notes. The denominator for the column titled 'Overall' is based on the number of unique patients seen over the study period. The denominator for each year column (e.g., 2006) is the number of unique patients seen during that calendar year. Patients are counted the first time they enter the cohort, both for the overall denominator and annual denominators; therefore their demographic information can vary annually. Percentages reported as "0.00" reflect percentages less than 0.01.

<sup>a</sup>USAF= United States Air Force; USA= United States Army; USN= United States Navy; USMC= United States Marine Corps; Other consists of United States Coast Guard, National Oceanic and Atmospheric Administration, and the US Public Health Service.

Notes. The denominator for the column titled 'Overall' is based on the number of unique patients seen over the study period. The denominator for each year column (e.g., 2006) is the number of unique patients seen during that calendar year. Patients are counted the first time they enter the cohort, both for the overall denominator and annual denominators; therefore their demographic information can vary annually. FOMCs at the following installations were included: Lackland, Keesler, Luke, Randolph, Sheppard, Columbus, Maxwell, Tyndall, Laughlin, Vance, and Goodfellow.

<sup>a</sup> USAF= United States Air Force; USA= United States Army; USN= United States Navy; USMC= United States Marine Corps; Other consists of United States Coast Guard, National Oceanic and Atmospheric Administration, and the US Public Health Service.

Table 13. Demographic characteristics of the patient population seen at Flight and Operational Medicine Clinic (FOMC) in the Air Mobility Command (AMC), 2003-2012.

Notes. The denominator for the column titled 'Overall' is based on the number of unique patients seen over the study period. The denominator for each year column (e.g., 2006) is the number of unique patients seen during that calendar year. Patients are counted the first time they enter the cohort, both for the overall denominator and annual denominators; therefore their demographic information can vary annually. Percentages reported as "0.00" reflect percentages less than 0.01. FOMCs at the following installations were included: MacDill, Travis, McGuire, McConnell, Charleston, Dover, Scott, Pope, McChord, Little Rock, Fairchild, and Grandforks. <sup>a</sup>USAF= United States Air Force; USA= United States Army; USN= United States Navy; USMC= United States Marine Corps; Other consists of United States Coast Guard, National Oceanic and Atmospheric Administration, and the US Public Health Service.

Notes. The denominator for the column titled 'Overall' is based on the number of unique patients seen over the study period. The denominator for each year column (e.g., 2006) is the number of unique patients seen during that calendar year. Patients are counted the first time they enter the cohort, both for the overall denominator and annual denominators; therefore their demographic information can vary annually. Percentages reported as "0.00" reflect percentages less than 0.01. FOMCs at the following installations were included: Whiteman, F.E. Warren, Minot, Barkdale, and Malmstrom.

<sup>a</sup>USAF= United States Air Force; USA= United States Army; USN= United States Navy; USMC= United States Marine Corps; Other consists of United States Coast Guard, National Oceanic and Atmospheric Administration, and the US Public Health Service.

Notes. The denominator for the column titled 'Overall' is based on the number of unique patients seen over the study period. The denominator for each year column (e.g., 2006) is the number of unique patients seen during that calendar year. Patients are counted the first time they enter the cohort, both for the overall denominator and annual denominators; therefore their demographic information can vary annually. Percentages reported as "0.00" reflect percentages less than 0.01. FOMCs at the following installations were included: Peterson, Patrick, Buckley, Vandenberg, and Los Angeles. <sup>a</sup> USAF= United States Air Force; USA= United States Army; USN= United States Navy; USMC= United States Marine Corps; Other consists of United States Coast Guard, National Oceanic and Atmospheric Administration, and the US Public Health Service.

Notes. The denominator for the column titled 'Overall' is based on the number of unique patients seen over the study period. The denominator for each year column (e.g., 2006) is the number of unique patients seen during that calendar year. Patients are counted the first time they enter the cohort, both for the overall denominator and annual denominators; therefore their demographic information can vary annually. Percentages reported as "0.00" reflect percentages less than 0.01. The FOMC at the following installation was included: USAF Academy.

<sup>a</sup>USAF= United States Air Force; USA= United States Army; USN= United States Navy; USMC= United States Marine Corps; Other consists of United States Coast Guard, National Oceanic and Atmospheric Administration, and the US Public Health Service.

Note. The denominator for this table is the number of unique patients seen during each calendar year. Patient demographic information is assigned from the first encounter that year, but all encounters are counted, e.g., if you had 5 encounters in 2006, we selected your demographic information from the first encounter in 2005 and your count for that year was 5.

Appendix 2. Enlisted Air Force Specialty Codes (AFSC) by career areas.

Career Area	AFSC	N*	%
Logistics	2A - Aerospace Maintenance	65,447	59.94
	2W - Munitions and Weapons	16,697	15.29
	2T - Transportation and Vehicle Management	11,841	10.84
	2S - Material Management	6,240	5.72
	2F - Fuels	4,053	3.71
	2M - Missile Maintenance	2,571	2.35
	2R - Maintenance Management	1,228	1.12
	2G - Logistics Plans	575	0.53
	2P - Precision Measurement	534	0.49
Support	3P - Security Forces	29,080	44.72
	3E - Civil Engineering	19,098	29.37
	3D - Cyberspace Support	7,053	10.85
	3S - Mission Support	5,174	7.96
	3M - Services	3,392	5.22
	3N - Public Affairs	1,178	1.81
	3H - Historian	55	0.08
Operations	1C - Command and Control Systems Operations	12,817	33.76
	1A - Aircrew Operations	10,914	28.75
	1N - Intelligence	7,781	20.50
	1T - Aircrew Protection	3,346	8.81
	1W - Weather	1,997	5.26
	1P - Aircrew Flight Equipment	811	2.14
	1S - Safety	242	0.64
	1U - Remotely Piloted Aircraft Sensor Operator	42	0.11
	1B - Cyberspace	13	0.03
Other	9 - Reporting Identifiers	28,559	83.44
	8 - Special Duty Identifiers	5,061	14.79
	7S - Special Investigations	605	1.77
Medical	4N - Aerospace Medical Service	8,221	40.10
	4A - Health Services Management	3,814	18.60
	4Y - Dental	1,957	9.55
	4E - Public Health	1,399	6.82
	4B - Bio Environmental Engineering	1,025	5.00
	4T - Hisopathology	881	4.30
	4P - Pharmacy	626	3.05
	4R - Diagnostic Imaging	596	2.91
	4C - Mental Health Service	446	2.18
	4H - Cardiopulmonary Laboratory	428	2.09
	4V - Ophthalmic	315	1.54
	4M - Aerospace and Operational Physiology	311	1.52
	4D - Diet Therapy	276	1.35
	4J - Physical Medicine	205	1.00
Acquisition	6F - Financial	1,910	70.22
	6C - Contracting	810	29.78
Professtional	5J - Paralegal	661	64.80
	5R - Chaplain Assistant	359	35.20

\*The overall count is based on the number of unique patients over the study period; a person is counted once when they first enter the cohort.

Appendix 3. Officer Air Force Specialty Codes (AFSC) by career areas.

Career Area	AFSC	N*	%
Operations	11 - Pilot	15,577	51.77
	13 - Space, Missile, C2	5,091	16.92
	12 - Combat Systems	4,631	15.39
	14 - Intelligence	2,440	8.11
	16 - Operations Support	1,224	4.07
	15 - Weather	471	1.57
	10 - Operations Commander	343	1.14
	17 - Cyber Operations	314	1.04
Medical	46 - Nurse	3,686	36.54
	44 - Physician	1,432	14.20
	43 - Biomedical Specialists	1,162	11.52
	41 - Health Services	948	9.40
	42 - Biomedical Clinician	891	8.83
	47 - Dental	682	6.76
	48 - Aerospace Medicine/Flight Surgeons	648	6.42
	45 - Surgery	529	5.24
Logistics	40 - Medical Commander	109	1.08
	21 - Logistics	2,991	93.85
Acquisition	20 - Logistics Commander	196	6.15
	62 - Developmental Engineer	2,061	39.03
	63 - Acquisition	1,629	30.85
	64 - Contracting	570	10.79
	65 - Finance	496	9.39
	61 - Scientific /Research	489	9.26
Support	60 - Program Director	36	0.68
	32 - Civil Engineer	989	43.04
	31 - Security Forces	690	30.03
	35 - Public Affairs	339	14.75
Professional	30 - Support Commander	280	12.18
	51 - Law	1,144	63.13
Other	52 - Chaplin	668	36.87
	71 - Special Investigations	272	100.00

The overall count is based on the number of unique patients over the study period; a person is counted once when they first enter the cohort.
